**What 158th FW members need to know about Corona Virus and their health:**

**Watch for symptoms**

Reported illnesses have ranged from mild symptoms to severe illness and death for confirmed coronavirus disease 2019 (COVID-19) cases.

The following symptoms may appear **2-14 days after exposure, however most infected persons do not have symptoms for a week or more AFTER becoming infected:**

- Fever (moderately high)
- Cough (Dry)
- Shortness of breath

**IF you develop emergency warning signs for COVID-19 get medical attention immediately, i.e. Emergency Room.** Emergency warning signs include*:

- Difficulty breathing or shortness of breath
- Persistent pain or pressure in the chest
- New confusion or inability to arouse
- Bluish lips or face

*This list is not all inclusive. Please consult your medical provider for any other symptoms that are severe or concerning.
PREVENTION:

Take steps to protect yourself

Clean your hands often

- **Wash your hands** often with soap and water for at least 20 seconds especially after you have been in a public place, or after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, **use a hand sanitizer that contains at least 60% alcohol**. Cover all surfaces of your hands and rub them together until they feel dry.
- **Avoid touching your eyes, nose, and mouth** with unwashed hands.

Avoid close contact

- **Avoid close contact** with people who are sick
- Put **distance between yourself and other people** if COVID-19 is spreading in your community. This is especially important for **people who are at higher risk of getting very sick** (older patients >65, Serious Medical Problems like Heart Disease, Lung Disease, Diabetes, Cancer, Immune Compromised).
**Take steps to protect others**

Stay home if you’re sick

- **Stay home** if you are sick, except to get medical care. Learn [what to do if you are sick](#).

Cover coughs and sneezes

- **Cover your mouth and nose** with a tissue when you cough or sneeze or use the inside of your elbow.
- **Throw used tissues** in the trash.
- Immediately **wash your hands** with soap and water for at least 20 seconds. If soap and water are not readily available, clean your hands with a hand sanitizer that contains at least 60% alcohol.

Wear a facemask **IF you are sick**

- **If you are sick**: You should wear a facemask when you are around other people (e.g., sharing a room or vehicle) and before you enter a healthcare provider’s office. If you are not able to wear a facemask (for example, because it causes trouble breathing), then you should do your best to cover your coughs and sneezes, and people who are caring for you should wear a facemask if they enter your room. Learn [what to do if you are sick](#).

- **If you are NOT sick**: You do not need to wear a facemask unless you are caring for someone who is sick (and they are not able to wear a facemask). Facemasks may be in short supply and they should be saved for caregivers.
Clean and disinfect

- **Clean AND disinfect** *frequently touched surfaces daily.* This includes tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets, and sinks.
- **If surfaces are dirty, clean them:** Use detergent or soap and water prior to disinfection.

**To disinfect:**
Most common EPA-registered household disinfectants will work. Use disinfectants appropriate for the surface.

**Options include:**

- **Diluting your household bleach.**
  To make a bleach solution, mix:
  - 5 tablespoons (1/3rd cup) bleach per gallon of water
  - OR
  - 4 teaspoons bleach per quart of water

  Follow manufacturer’s instructions for application and proper ventilation. Check to ensure the product is not past its expiration date. Never mix household bleach with ammonia or any other cleanser. Unexpired household bleach will be effective against coronaviruses when properly diluted.

- **Alcohol solutions.**
  Ensure solution has at least 70% alcohol.

- **Other common EPA-registered household disinfectants.**
  Products with [EPA-approved emerging viral pathogens](https://www.epa.gov/coronavirus/epa-approved-emerging-viral-pathogens) claims are expected to be effective against COVID-19 based on data for harder to kill viruses. Follow the manufacturer’s instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).
**IF you are sick with COVID-19 or a respiratory illness:**

**Follow the steps below:** If you are sick with COVID-19 or suspect you are infected with the virus that causes COVID-19, follow the steps below to help prevent the disease from spreading to people in your home and community.

Stay home except to get medical care

- **Stay home:** People who are mildly ill with COVID-19 are able to isolate at home during their illness. You should restrict activities outside your home, except for getting medical care.
- **Avoid public areas:** Do not go to work, school, or public areas.
- **Avoid public transportation:** Including Bus, Subway, ride-sharing, taxis.

Monitor your symptoms

- **Seek medical attention:** Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing).
- **Call your doctor:** Before seeking care, call your healthcare provider and tell them that you have, or are being evaluated for, COVID-19.
- **Wear a facemask when sick:** Put on a facemask before you enter the facility. These steps will help the healthcare provider’s office to keep other people in the office or waiting room from getting infected or exposed.
- **Alert your command structure and/or 158th Public Health:** Ask your healthcare provider to call the local or state health department. Persons who are placed under active monitoring or facilitated self-monitoring should follow instructions provided by their Provider, Public Health, local health department or occupational health professionals, as appropriate.

Separate yourself from other people and animals in your home

- **Stay away from others:** As much as possible, you should stay in a specific room and away from other people in your home. Also, you should use a separate bathroom, if available.
- **Limit contact with pets & animals:** You should restrict contact with pets and other animals while you are sick with COVID-19, just like you would around other people.
Avoid sharing personal household items

- **Do not share:** You should not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home.

- **Wash thoroughly after use:** After using these items, they should be washed thoroughly with soap and water.

Clean all “high-touch” surfaces everyday

- **Clean and disinfect:** Practice routine cleaning of high touch surfaces. High touch surfaces include counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.

- **Household cleaners:** Use a household cleaning spray or wipe, according to the label instructions. Labels contain instructions for safe and effective use of the cleaning product including precautions you should take when applying the product, such as wearing gloves and making sure you have good ventilation during use of the product.

Discontinuing home isolation

- **Stay at home until instructed to leave:** Patients with confirmed COVID-19 should remain under home isolation precautions until the risk of secondary transmission to others is thought to be low.

- **Talk to your healthcare provider:** The decision to discontinue home isolation precautions should be made on a case-by-case basis, in consultation with healthcare providers, Public Health, and state/local health departments.
